

Success rates

We are delighted that each year, The Lister Fertility Clinic's success rates are well above the national average.

Our latest success rates are available from The Human Fertilisation and Embryology Authority (HFEA) who, each year, publish a comparative table of data about different clinics and their success rates.

The Lister Fertility Clinic has used its extensive database to create a unique Pregnancy Calculator from which couples can calculate their individual chances of success. Try out the calculator online at www.ivf.org.uk

Further Information

Patient information evenings

These are held once a month for any couples thinking about fertility treatment. The presentation can help to answer many questions as well as enable couples to reach a decision about which clinic is suitable for them.

If you would like to come to one of these evenings, please call **020 7881 2000**. Our Patient Liaison Officer will provide you forthcoming dates and reserve a place for you.

Visit our website

Our website www.ivf.org.uk contains a lot of useful and up-to-date information about fertility treatments.

The Lister Fertility Clinic in the City

The Lister Fertility Clinic is the largest fertility centre in the UK. It opened in 1988 and has subsequently earned a reputation as one of the most successful fertility units in the country.

We welcome all individuals and couples seeking help with fertility problems and pride ourselves on being able to assist those whose treatment has been unsuccessful elsewhere. For this reason, we operate a more flexible referral policy which makes access easier for couples with more complicated fertility problems or circumstances.

Our Philosophy

We pride ourselves on our commitment to excellence and on our holistic approach to investigating and treating fertility problems. We endeavour to empower our patients with the knowledge and information to enable them to be involved in their own fertility management. This in turn enables us to tailor treatment to meet individuals' needs.

We encourage patients to discuss freely with us any anxieties and problems. We believe that this free association creates a relaxed atmosphere within the clinic and thus is a contributing factor to our overall success rates. Our aim is to help couples achieve their long-awaited family but, if this is not possible, we hope that we would have helped them come to terms with their infertility.

The Lister Fertility Clinic in the City is a unique private medical centre in a highly convenient location for anyone working in or living near the City of London.

Hossam I Abdalla (Sam)
Clinical Director

Alison Taylor is a Consultant Gynaecologist and Specialist in Reproductive Medicine and Surgery. She has specialised in the management of fertility treatment since 1991.

Alison's clinical training and research was at Guy's and St Thomas' Hospital where she became a Consultant in 1998. She ran the Assisted Conception Unit at Guy's until 2005 before joining the team at The Lister Fertility Clinic.

She sees patients for consultations at the City of London Medical Centre and at The Lister Fertility Clinic in Chelsea. She performs egg collections and embryo transfers as well as surgical procedures such as diagnostic laparoscopies and hysteroscopies at The Lister Hospital. Alison enjoys all aspects of her clinical work from initial diagnosis to discussing treatment options with patients and agreeing individualised treatment with them. She is also part of the management team of The Lister Fertility Clinic.

Our services

The Lister Fertility Clinic in the City provides initial and follow-up consultations with a senior consultant, Dr Alison Taylor, who arranges investigations where appropriate and discusses different treatment options with patients. A semen test can be arranged with the embryologists at The Lister Hospital. An ultrasound scan is normally carried out on the day of the consultation and the results discussed the same day. With the patient's consent, we will continue to keep the referring doctor informed of the couple's progress in writing.

There is a fertility nurse practitioner in the clinic who performs ultrasound scanning, cycle monitoring (IVF / ICSI / IUI) and blood tests. A personalised service can be offered with a good level of continuity by seeing the same member of staff regularly.

There is no waiting time for treatment and patients can usually commence treatment at a time that suits them.

After cycle preparation at the City of London Medical Centre, egg collection, embryo transfer and Intra-uterine Insemination (IUI) will be carried out at The Lister Fertility Clinic in Chelsea. Counselling is available to all couples and is offered free of charge.

Referrals

Patients can self refer but it is sometimes helpful to receive a written referral letter from the GP or consultant as this will give us a better picture of previous medical and gynaecological history. Written referrals should be made to:
